

BLU Studio 7.0 II Back Cover Replacement

Replace your damaged back cover to better protect your Blu Studio 7.0 II.

Written By: Abby

INTRODUCTION

This guide provides steps on how to remove and replace the back cover of the Blu Studio 7.0 II.

TOOLS:

- [Heavy-Duty Spudger](#) (1)
 - [Precision Tweezers Set](#) (1)
 - [iFixit Opening Tools](#) (1)
-

Step 1 — Back Cover

- Locate the seam between the black and silver pieces of the phone.
- Insert a plastic opening tool into the seam and firmly pry the black back piece away from the silver front piece.
- ⓘ To create the initial separation for the plastic opening tool, you may need to use either a spudger or metal spudger. If you use a metal spudger, be aware this can damage your phone if you aren't careful.

Step 2

- Work your way around the edge of phone, firmly prying the pieces apart.

Step 3

- ☑ Once the back has been removed, you can snap the new one into place by pressing firmly around the edges with your fingers.
